VALUATION METHODOLOGIES AND VALUE CONCLUSION

Valuation Methodologies	Basis of Consideration
90 Trading-10 Trading Days	<p>The Company's shares are listed on BSE Ltd, with a higher frequency of trading. To determine the equity value in accordance with Regulation 164 of SEBI ICDR Regulation, 2018, the following criteria are considered for frequently traded shares:</p> <p>The equity shares' price for preferential issue should not be less than the higher of:</p> <ul style="list-style-type: none"> • The 90 trading days volume weighted average price (VWAP) of the related equity shares quoted on the recognized stock exchange preceding the relevant date. • The 10 trading days volume weighted average prices of the related equity shares quoted on a recognized stock exchange preceding the relevant date. <p>We have considered this methodology in Jaykay due to the applicability of Regulation of 164(1) of SEBI ICDR Regulation, 2018.</p>

Computation of fair value of Jaykay:

90 Trading-10 Trading Days

Particular	Details
Total Value of the Shares trading of 90 TD	3,474,658,004.00

VALUATION METHODOLOGIES AND VALUE CONCLUSION

There are three approaches to Valuation namely Income, Asset and Market Approaches.

Approach	Valuation Methodologies	Basis of Consideration
Asset	Net Asset Value (NAV) Method	<p>The Asset based method views the business as a set of assets and liabilities that are used as building blocks of a business value. The difference in the value of these assets and liabilities on a Book Value basis or Realizable Value basis or Replacement Cost basis is the business value. However, this methodology recognizes historical cost of net assets only without recognizing its present earnings, comparative financial performance of its peers and their enterprise values etc. Therefore, in general Net Asset Value only reflects the minimum proxy value of the company.</p> <p>In the case of JK Tech, the company is engaged in IT services and under Going Concern assumption. Hence, to determine the minimum proxy value, we have opted this method.</p>
Market	Comparable Companies Multiples (CCM) Method	<p>This methodology uses the valuation ratio of a publicly traded company and applies that ratio to the company being valued. The valuation ratio typically expresses the valuation as a function of a measure of financial performance or Book Value (e.g., Revenue, EBITDA, EBIT, Earnings per Share or Book Value). A key benefit of Comparable Company Market Multiple analysis is that the methodology is based on the current market stock price. The current stock price is generally viewed as one of the best valuation metrics because it is based on observable inputs.</p> <p>In the case of JK Tech, we have applied this methodology as company has publicly listed peers.</p>
Income	Discounted Free Cash Flow (DFCF) Method	<p>The DFCF method expresses the present value of the business as a function of its future cash earnings capacity. This methodology works on the premise that the value of a business is measured in terms of future cash flow streams, discounted to the present time at an appropriate discount rate. The value of the firm is arrived at by estimating the Free Cash Flows (FCF) to Firm and discounting the same with Weighted Average cost of capital (WACC). The DFCF methodology is considered to be the most appropriate basis for determining the earning capability of a business. In the DFCF approach, the appraiser estimates the cash flows of any business after all operating expenses, taxes, and necessary investments in working capital and Capex are being met.</p> <p>We have considered this methodology for calculation of the equity value of the "JK Tech" based on its cash flows. After considering its business plan, we have calculated the Enterprise value and thereby derived the Equity value after adjusting its debts, cash and cash equivalents and surplus assets as on the date of valuation.</p>

For the purpose of valuation of equity shares in this transaction through DCF methodology, we have relied upon the projections provided by the management for the period beginning January 01, 2025, and ending March 31, 2029, duly supplemented by its Terminal Value based on the Gordon Model and extrapolating the adjusted free cash flows for last year at an annual growth rate of 5% to perpetuity.

DFCF Assumptions:

Particulars		Notes
Risk free rate (Rf) as on 31.12.2024	6.76%	Considered of long-term Indian government bond rate
Market Rate of Return	15.13%	BSE Sensex return on long term basis
Industry Beta... (β)	0.55	We have taken the company's Beta value (B) as 0.55. We have taken average of Un-Levered beta of listed peer in the industry, relevered by the debt-to-equity ratio of JK Tech, since the Company's shares are not listed
Additional Company Specific (Including Small Company) Risk Premium (Unsystematic risk) (CSR)	9.50%	We have given an 9.50% additional risk premium looking into company profile, financial structure, and ROI the investor will look into while investing in this type of company. This is also dependent upon the level of aggressiveness of the future cash flows and the present scenario of the country and company environment in which it is operating.
Cost of Equity (K_e)	20.87%	As per Modified CAPM model i.e. $[K_e = R_f + \beta(R_m - R_f) + CSR]$
Cost of Debt	Nil	We have considered the Valuation date Debt-Equity ratio and as on valuation date company is debt free.
Equity portion in capital structure	100%	
WACC	20.87%	$WACC = (K_e * \% \text{ Equity in Capital Structure}) + (\text{Cost of Debt} * \% \text{ Debt in Capital Structure} * (1 - \text{Tax Rate}))$
Growth Rate	5.00%	As the perpetuity growth rate assumes that the company will continue its historic business and generate Free Cash Flows at a steady state forever. Since terminal value constitutes a major proportion of the entire value of the business, we while deciding the terminal growth rate have given emphasis to economic factors & financial factors like Inflation of the Country, GDP growth of the Country, Projected Financials, Historical Financial Position, Organic & Inorganic growth strategies of the Company, investment opportunity etc. Accordingly, for perpetuity, we have considered 5% growth rate.

Based on our analysis of the Company and subject to our caveats as further detailed in this report, the fair value determined at INR 3,023.50 million and the fair value per share is INR 167.70/- based on 31st December 2024 financials.

Computation of Fair Value

Fair Value of J K Technosoft Limited				
				All Amount INR
Approach Applied	Methodology Applied	Weight	Equity Value per Share	Weighted Average Equity Value per Share
Asset	Net Asset Value	20%	148.02	29.60
Market	Company Comparable Multiple	30%	164.21	49.26
Income	Discounted Cash Flow	50%	167.70	83.85
Weighted Average Equity Value per Share				162.71

Based on our analysis of the Company and subject to our comments and caveats as further detailed in this report, we have arrived at the value per equity share of the Company as INR 162.71/-.

Note: Kindly note that, as of valuation date, the company has 1,710,900 live Options, with exercise price as follows:

1. 903,000, with Exercise Price of INR 193.1/-
2. 421,000, with Exercise Price of INR 225.9/-
3. 138,600, with Exercise Price of INR 195.9/-
4. 98,300, with Exercise Price of INR 284/-
5. 150,000, with Exercise Price of INR 265.3/-

However, as of the valuation date fair market value of the company is lower than exercise price of above mentioned options.

Therefore, these options will not be making any dilutive effect on the value of equity share.

As Indian Accounting Standard (Ind AS) 33, says that Options and warrants have a dilutive effect only when the average market price of ordinary shares during the period exceeds the exercise price of the options or warrants (ie they are 'in the money').
